

SAY

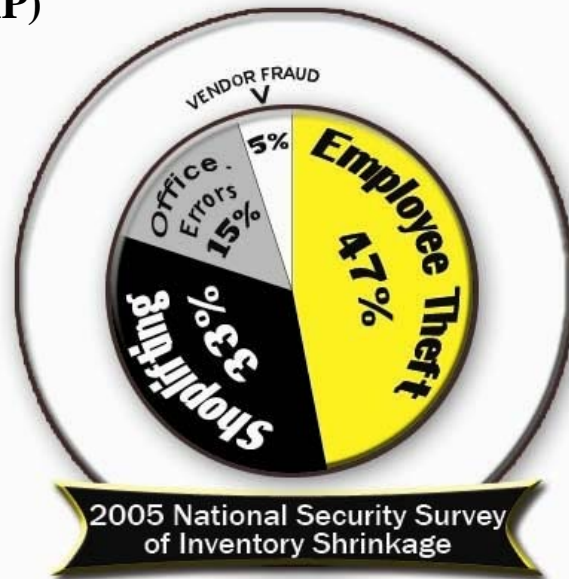

SECURITY GROUP

SAY Security's POS integration connects your CCTV system with your Register, ATM, and Access Control with advanced application integration software. This gives your DVR the ability to have Text Overlay and to search video by transaction, helping to further assist in the hunt for fraud, theft and office error.

Our ability to interface directly with widely used POS systems such as Micros, Aloha, Radiant, POSitouch and other industry leaders gives our resellers the advantages of reduced total solution cost, streamlined field installation and more robust and reliable system. We are also able to develop new POS and ATM interfaces very rapidly, and we welcome reseller inquiries for development of additional interfaces.
